tion of the un_oubtedly valuable cop-

In Montana there has been a surpris

year have changed the aspect of that property from a decadent mine to one with its best years ahead. Diamond drill borings have shown the Anaconda ore bodies to be rich and wide for a thousand feet below the present bot-tom workings of the mine, and developments by the North Butte to the northward, and by the Pittsburg & Montana and other properties to the eastward, indicate most strongly that the un-worked territory of the Anaconda, and other properties to the eastward, indicate most strongly that the unworked territory of the Anaconda, which is of great extent, will develop vast ore bodies of high grade. The Pittsburg & Montana began production in the latter half of 1905, and is now making about 31,300,000 pounds of blister copper monthly, but should become a much larger producer within a short time. The East Butte company has secured extensive holdings in the eastern part of the camp, and gives promise of making a large mine, though a much longer period will be required for proper development than was the case with the meteoric North Butte. The Corbin district of Montana has not as yet made good the promise of large mines. Copper mining operations of Colorado Copper. An inquiry among the artists in this city today developed the opinion that the picture of Giorgione catalogued in Mrs. Gardner's collection is undoubtedly the same referred to as having disappeared from the Loschi palace at Vicenza. It was pointed out that in a crease production from the Boston &

The second district of the territory measured by output, is the Clifton-Morenci field of Graham county, where are located the Arizona, Detroit, Shannon and other smaller properties. The ore bodies of this district are low in grade as a rele, though shipments averaging above 5) per cent have been made during the year, but the ore bodies are of monstreus size. There is no good reason why Graham county should not continue to increase itse output from year to year, like the Lake Superior district, which it slightly resembles in the particulate of having almost inexhaustible deposits of low grade ore. The Globe district, in Gila county, ranks third in importance, and, in addition to the Old Dominion and United Globe mines, there are several other highly important properties, as yet Gila county, ranks third in importance, and, in addition to the Oid Dominion and United Globe mines, there are several other highly important properties, as yet in the development stage, but which will be heard from later as, large producers. Unlike the Warren district of Cochise county, where nature seems to have concentrated her treasures in a single big basin, the Globe district has ore bodies of promise over an area of many square miles, and it is not improbable that some of the most important copper developments of the territory may occur in this district within the next few years. Fourth among the Arizona districts stands Yavapat county, which enjoys the somewhat doubtful distinction of having more attempts at mines, and more incorporated mining companies, than any other county in the territory, if, indeed, it has not more of each than all the other counties of the perritory, combined. As yet Yavapai county has but a single important copper mine—the great United Verde. When some strong combination of experienced mining men take hold in this district. Yavapai county will be given some more good copper mines. Financial debility is retarding the progress of a number of decidedly promising properties. In Pima county the Imperial is already debility is retarding the progress of a number of decidedly promising properties. In Pima county the Imperial is already a considerable producer, with prospects of soon becoming a large mine. The Helvetia is to resume, and bids fair to make a good property. In Pinal county several properties of decided promise are undergoing development. Yuma, Santa Cruz, Maricopa and Coconino counties have as yet no producers of importance, but all have copper prospects of merit, and it is but a matter of time when all will have mines of merit.

Utah's Brilliant Prospects.

Utah's Brilliant Prospects.

The 1905 copper output of Utah does not show any vast increase, though the gain is a substantial one, but the developments of the year have been of the greatest importance and warrant high predictions for the future. The importance of the porphyry ores of the Bingham district have been realized at last by mining men. It is probable that two of the Bingham mines possess the two largest ore bodies of any metal that are now known. These are very low in grade, but workable at a profit on a normal copper market, and must, of necessity, eventually make mines of the first rank, though many years will be required for their full exploitation. The low grade mines of Bingham will follow the experience of the Lake Superior district, and Utah is, beyond all question, one of the important future copper districts of the world. In Beaver county the Newhouse properties are producing on a fair scale, but not very much has been accomplished by the other mines of the district, many of which have suffered in the past from expert financierins. That a number of good mines will be developed in Beaver county eventually is not open to doubt. There also are copper deposits of more or less promise in a majority of the other counties of the state, and hig things are being predicted of the copper measures of the Uintah reservation, recently opened for exploitation.

In California the production has failen off, but the loss is only temporary. There are more than a dozen California county, and from a single mine, the Iron Mountain. This is not worked out, but the necessity of exploiting the lower grade ores has led to a change of base.

ignormance that several new mines will result therefrom. The Lake Superior district may be relied upon to increase its production steadily year by year for at least five years to come, from work now under way, and it is probable that still further development work, to be undertaken during the next five years.

DISAPPEARED FROM ITALY

EXCITEMENT IN ROME OVER THE

MATTER.

Production of Leading Mines.

In Montana there has been a surprissing reversal of form during 1905. It was generally felt one year ago that will Montana had some of the largest and richest mines of the world, and would continue the leading copper producing district for years to come, no great increase in output could be looked for until normal conditions and future discoveries of new deposits would be carbied producers.

Production of Leading Mines.

In the followin- table is given a list of the twenty-six mines of the United States that have produced 10,000,000 of the precious pleture, "Christ With the Cross," by Giorgone, originally preserved in the Loschi palace, Vicenza, it is reported that the picture is now in, also, Gardner collection at Boston, "Counts Avoirdunoiss," (Pounds Avoirdunoiss)

DISAPPEARED FROM ITALY

In Montana there has been a surprissing reversal of form during 1905. It was generally felt one year ago that while Montana had some of the largest and richest mines of the veryle, and would continue the leading copper producing district for years to come, no great increase in output could be looked for until normal conditions and future discoveries of new deposits would be comparatively infrequent. As a matter of fact the Buttle camp, last made in the producers will be demanded the producers.

Some Small Mines.

Washington and Oregon have numerous deposits of copper ore, and in the first-named state considerable progress has been made within the past two or three years. While the 1905 production of Washington was trivial, a considerable production should be effected during the next few years. Idaho has a number of small mines, but the output remains small.
